Application Serial No.: 10/561,584 Attorney Docket No.: 554-001.002

In the Claims:

Please amend the claims as follows:

print head (5a, ..., 5f).

- 1. (original) A printing device for printing sheet elements (2) that are serially fed to the printing device, in particular product labels made of temperature-sensitive paper or paper substitute materials, comprising at least two separate feed devices (3a, ..., 3f) for each liner strip (1) comprising the sheet elements (2), wherein each feed device (3a, ..., 3f) comprises a peeling-off device (4a, ..., 4f) for peeling the sheet elements (2) from the liner strip (1), and wherein the feed devices (3a, ..., 3f) are associated with a print head (5a, ..., 5f) with a thermal slat (6a, ..., 6f) for printing a sheet element supported by a counterpressure surface (7a, ..., 7f), and comprising an application device (8) for removing the printed sheet element from the print head (5a, ..., 5f) and for applying said printed sheet element to a product,

 characterised in that the counterpressure surface (7a, ..., 7f) forms part of the
- (withdrawn) The printing device according to claim 1,
 characterised in that each feed device (3a, ..., 3f) is associated with a print head (5a, ..., 5f).
- (withdrawn) The printing device according to claim 1,
 characterised in that the feed devices (3a, ..., 3f) are arranged along a longitudinal path.

Application Serial No.: 10/561,584 Attorney Docket No.: 554-001.002

- 4. (withdrawn) The printing device according to claim 1, characterised in that the feed devices (3a, ..., 3f) are arranged along a path in the shape of a graduated circle.
- (withdrawn) The printing device according to claim 4,
 characterised in that the application device (8) is arranged so as to be centered within the path in the shape of a graduated circle.
- 6. *(currently amended)* The printing device according to claim <u>29</u>, characterised in that the feed devices (3a, ..., 3c) are arranged vertically, one on top of the other.
- 7. (previously presented) The printing device according to claim 6, characterised in that the application device (8) is embodied as a stamp that can be moved in a vertical direction.
- 8. *(withdrawn)* The printing device according to claim 3, characterised in that the application device (8) is a stamp that can be moved in a direction that is perpendicular to the longitudinal path.
- 9. *(currently amended)* The printing device according to claim 1, characterised in that a single print head (5) is associated with the feed devices (3a, ..., 3c), of which there are several, and in that association of the print head (5a, ..., 5e) with the respective feed device (3a, ..., 3f) takes place via an adjustment device (9).

Application Serial No.: 10/561,584 Attorney Docket No.: 554-001.002

(original) The printing device according to claim 9,
 characterised in that the application device (8) is coupled to the adjustment device (9).

- 11. *(currently amended)* The printing device according to claim 89, characterised in that the application device (8) and the adjustment device (9) can each be moved independently from each other along a single axis.
- 12. *(currently amended)* The printing device according to claim 89, characterised in that an additional application device removes the labels from the feed devices (3a, ..., 3f) and feeds them to athe print head (5).
- 13. (withdrawn) The printing device according to claim 1, characterised in that the application device is operated pneumatically, hydraulically or electrically.
- 14. (withdrawn) The printing device according to claim 1, characterised in that the application device can be moved along multiple axes or in a rotary manner.
